Art Unit: 2817

#### **DETAILED ACTION**

1. Applicant's arguments with respect to claims 1-4, 16-21 and 32-36 have been considered but are most in view of the new ground(s) of rejection.

#### Claim Rejections - 35 USC § 102

- 1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:
  - (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claim1, 18 and 34 are rejected under 35 U.S.C. 102(e) as being anticipated by Warwar et al. US Patent No. 6,738,922.
- 3. Regarding the claims, Warwar disclose a clock recovery unit (400), which uses a detected frequency difference signal to help establish phase lock between a transmitted data signal and a recovered clock signal. The clock recovery unit (400) is used to recover a clock signal (426) from a transmitted data signal (418). The clock recovery unit (400) includes a phase locked loop circuit and a frequency detection circuit (410), which includes a digital phase tracking circuit (416), a phase/frequency detector (412) and a glitch suppressor (414). The frequency detection circuit (410) receives a reference clock signal (428), which is passed to the phase/frequency detector circuit (412) where it is compared with the clock signal (430) generated by the digital phase tracking circuit (416). The frequency detection circuit (412) then outputs a frequency difference signal (432) to the glitch suppressor (414). If the frequency difference is small, the glitch suppressor suppresses the frequency difference signal. The phase detector circuit (402) continuously detects the phase difference between the transmitted data signal (418) and the

Application/Control Number: 10/001,448

Art Unit: 2817

output clock signal (426) and output the phase difference (420) to summer (404) which sums the phase difference signal (420) with the frequency difference signal (434) to generate a combined difference signal (424) which is the filtered by loop filter (406) to provide a filtered phase difference signal to VCO (408) as a controlled voltage signal. The VCO (408) continually adjusts the oscillation frequency of the output clock signal using the detected phase difference.

Page 3

### Allowable Subject Matter

4. Claims 2-17, 19-33, 35 and 36 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

## Conclusion

- 5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Krista M. Flanagan whose telephone number is (571) 272-2203. The examiner can normally be reached on Monday Friday, 8 4:30.
- 6. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert J. Pascal can be reached on (571) 272-1769. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

7. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
